## Wall Hanging Problem

I have a 6 " by 8 " piece of embroidery to create a wall hanging. I want to make a border all around it. I already have a piece of material that I can cut into strips to make the border. The material is 8 " by 9 " ( 72 square inches). I want to use all of my material for the border, but I don't know how wide I should cut the strips. To look balanced, the border should be the same width on all four sides.

## Wall Hanging Problem $\mid$ Quadratic Equations

## Teachers' Notes

There are multiple ways to visualize the border, but all generate an equivalent quadratic equation: $\quad 4 x^{2}+28 x=72$

Here are two ways to visualize the border:

| $\mathrm{X}^{2}$ | x | 8X | x | $\mathrm{X}^{2}$ |
| :---: | :---: | :---: | :---: | :---: |
| x |  | 8" |  | x |
| 6X | 6" |  |  | 6X |
| x |  |  |  | x |
| $\mathrm{X}^{2}$ | X | 8X | X | $\mathrm{X}^{2}$ |

Here, the border is composed of 8 pieces:
$x^{2}+x^{2}+x^{2}+x^{2}+6 x+8 x+6 x+8 x=4 x^{2}+28 x$

## Wall Hanging Problem $\mid$ Quadratic Equations

Here, the border is composed of 4 pieces:
$x(8+2 x)+6 x+x(8+2 x)+6 x=8 x+2 x^{2}+6 x+8 x+2 x^{2}+6 x=4 x^{2}+28 x$
The border has to equal 72 square inches so

$$
4 x^{2}+28 x=72 \text { or } 4 x^{2}+28 x-72=0
$$

Factoring out 4, $x^{2}+7 x-18=0$

$$
(x+9)(x-2)=0
$$

Solution Set: - 9 and $2(-9)$ is a meaningless solution, so, the border pieces should be 2 inches wide.
